63. Create AMS Asset Data Source Records for CMMS Data Sources . The following image shows the AMS Analytics data sources and the CMMS data source. The AMS editor creates log entries. Creating a new log entry involves the following steps: 1. Enter a name for the new entry. 2. Select a storage location for the new entry. 3. Next, select the name of the new data source and specify how the data will be synchronized. AMS Analytics performs synchronization operations automatically after a set period of time, so there is no need to set a synchronization period here, as is usual for CMMS data sources.
