Removal of  
organic micropollutants  
from stormwater by

---

adsorption on activated carbon. Stormwater runoff from rural and urban areas is the source of many organic micropollutants in receiving surface waters. This study examined the potential of using activated carbon (AC) as a soil or sand filter for stormwater treatment. This study used

---

laboratory batch and pilot-scale experiments to examine the effects of AC dose, flow rate, surfactant addition, and dye concentration on stormwater treatment. The sand filter experiment used a media bed system that mimicked AC within a soil. The bed was operational for at least

---

seven months and AC was regenerated via two different methods at the end of the study. A 20-L jar study of AC was conducted to examine the removal potential of a new commercially available AC type. In laboratory batch tests, the sedimentation index (SI, removal efficiency of sediment suspended

---

solids in percent)  
increased by 43-63%  
with a simple 1-h flow,  
and was enhanced by  
43-104% with a  
simulated moving bed.  
The SI was enhanced by  
>40% with a simple 1-h  
flush at 75% of the bed  
volume at most flow  
rates. The SI was  
enhanced by 52-98% at  
the pilot-scale with the

---

standard flush mode, and was enhanced by >200% at the pilot-scale when surfactant was added. The transient response test showed that the removal efficiency for total suspended solids was 70% after 2 h, and that this improved to approximately 95% after 24 h. The flow-injection

---

test revealed that most organic micropollutants can be removed efficiently (lowest PNEC

rusix is a text-to-speech and text-to-phonetic converter for your keyboard. It allows you to write text in English, Russian or any other language in Cyrillic

---

alphabet on a standard keyboard, and the letters will be converted to corresponding sounds of the target language. If you have a Russian keyboard, the program will automatically convert a text you type to Russian pronunciation. Prefer to keep the English/Cyrillic keyboard layout intact?

---

No problem! rusix is designed to work along with the English and Russian keyboards and will maintain the current keyboard layout for you. Do you find the Russian keyboard layout easier to learn than QWERTY? The phonetic layout is based on the AATSEEL standard and is used mostly by those who

---

struggle to learn the Russian language. For example, English speakers find typing in the Cyrillic alphabet really difficult, because it requires them to learn the exact way Russian letters look like. rusix is a text-to-speech and text-to-phonetic converter for your keyboard. It allows you to write text in

English, Russian or any other language in Cyrillic alphabet on a standard keyboard, and the letters will be converted to corresponding sounds of the target language. A free version of rusix comes with its own strict limitations, such as a maximum 50 characters per text, 20 minutes of free time for converting

---

and none of the above functionality. However, there is also a pro version that comes with all the features mentioned above, and allows unlimited conversions, constant free time, text editing and more. What's New in This Release: Main Menu Added app icon Status and general error

rusix is a tool for phonetic text writing in Cyrillic. The tool is a part of the rusix package. The application is available in two versions: rusix for DOS and rusix for Windows. The difference is that for the first one you will need a Russian keyboard to work, while

---

the second version works like a text editor. Conversely, the application will only work as a phonetic translator for those who use English QWERTY keyboards. However, you can still use the phonetic keyboard for other languages that support the AATSEEL standard, such as Arabic or

---

Persian. If you are connecting to a computer that's set to work in English, the rusix application won't change your default keyboard layout. The phonetic layout used by rusix is based on a standard that was created in 2006. This layout relies on the AATSEEL standard, which is an international

---

standard for a keyboard that can be used worldwide, regardless of the language of your system. This layout is more than suitable for learners of the Russian language, because it allows them to learn the script very easily. The phonetic keyboard used by rusix has 48 keys and is suitable for text

---

editing. It can also be used to type Cyrillic text using Unicode 2.0. Your keyboard can be replaced by a generic keyboard that is identical to the one offered by rusix. To do this, simply copy its layout to your computer (in the language of your choice).

rusix Features: -  
The phonetic keyboard

---

allows you to type Cyrillic text on your computer. - The application also enables the typing of special Cyrillic symbols such as Cyrillic accent marks and Cyrillic umlauts. - A number of Cyrillic Unicode characters that were added to the script over the years can also be used. - The

---

application can generate audio files that speak Cyrillic words and phrases. - rusix is compatible with any standard QWERTY keyboard (allowing you to work even in computer set to the system language). - You can copy the text to the clipboard and then paste it in any text editing

---

application. - The application is portable, and it can be used with a FAT file system. - You can use the tool even when installing the Windows operating system. - rusix works on any computer, regardless of the operating system installed on it. - The program can be

rusix (Russian Text Editor) is a program that helps people who write in Russian to translate text into Russian. It will make the text phonetically by matching each Latin character with the corresponding Russian character. The English Wikipedia uses the phonetic Russian

---

alphabet, for example, to write in English. The application that you are about to see can be used for the same purpose, which makes it much easier to use than the English language. rusix allows you to have a Russian keyboard attached to your computer and it will not only translate text for

---

you but also insert symbols that will be displayed in place of Roman letters, so you will be able to type directly in Russian.

Highlights: 1. Innovative software. All the necessary information for Russian text editing is located within the main window, without any need to use external

---

applications. 2. Quick and comfortable navigation. The application uses the system tray for displaying key combinations for opening and closing the program. 3. Powerful translational capabilities. The application can translate the contents of files, documents, emails,

---

web pages, any text that you type. ManPages is a self-contained command-line program that is used to manage the man pages on your system. It is part of the GNU project, and available for Linux, Mac OS, and Windows. The graphical version of ManPages is called GNU Man (also from the GNU project),

---

and is available for Windows, Mac OS X, and Debian GNU/Linux.

ManPages is one of the utilities in the GNU coreutils suite.

ManPages is a command-line program, and does not have a graphical user interface. However, it can be run from a GUI.

ManPages has a command-line syntax

---

that makes it very easy for users of non-Unix operating systems to manage their man pages. In addition to text-mode commands, ManPages offers many options for viewing, and generating man pages. This includes the ability to generate a large number of text-based man pages, viewing and

---

editing man pages, and a comparison tool. ManPages is divided into three main sections: "Man Page Editor," "Man Page Viewer," and "Man Page Generator." On a non-GUI system, a man pages file is called a "man page" and it is usually located in a man directory. One man page file can be used to

---

manage several different man page files. To view a man page file, you use the man command to display the man page:  
man man
