Are you the kind of person who is at the mercy of the way the software you utilize works? Do you want to be able to rapidly and securely create online catalogues, or simply a combination of the two? The new **Lightroom Catalog mode** is what you need, as it rates highly on both aspects. In this mode, you can create a hardcopy of your work (with a Share to Dropbox button). This allows you to archive and manage your work in a much more user-friendly way. I recently switched to this mode, as I found it difficult to use for cataloging. In Lightroom, I do not organize my images by subject or even sub-mitters. Instead, I have a directory for each calendar year, and within that directory I organize the sets and cameras I used to shoot that particular year. The new **Synchronize photos** workflow mode will help you become a highly productive photographer. For most people, they'll spend most of the time making their camera's Raw files compatible with Photos and Lightroom. This mode will merely inform you to the errors in your camera's Raw files, letting you make the correct adjustments in your workflow. You can then instantly apply those adjustments. If you have a high-quality monitor, you will instantly receive a preview of your adjustments. This can be a freeing experience for some people, as they will spend less time creating images, but more time modifying their images. Another new great workflow mode is **Crop to Grid**. This makes it much faster to crop your images without going through the hassle of pressing the desktop button, typing in the width and height you want your new crop to be, and then pressing ok. Using this mode can be very beneficial in a number of situations.

It was one of the few professional software that wasn't available for Microsoft Windows at the time. **How do I edit my photos in Photoshop?**
When you work with a significant amount of files, it's often helpful to use a file organizer that will streamline the editing process. Some people use a program like Photoshop Elements.
