

Smart Live 7-4shared.zip

of the active vnc servers is the lightest secure and working vnc server. Semaphore Server can be used for both local network and internet. Caution: even simple VNC server may be used to transfer data like email or file servers or to turn a computer into web server but a smart VNC server is for a remote desktop connections. a smart VNC server uses in the best and most secure way to access your computer remotely. if you use this VNC server in a firewall it means that it will slow down the internet traffic. . How to run Semaphore server: install a web server. Install a web server and a VNC server . Install a web server. Use Apache and PHP for example . Install a web server and a VNC server. Install a web server and a VNC server . Install Semaphore Server. download and run the installer . the installer will ask some questions . the first question is about using a web server (install a web server) . the second question is about using a VNC server . the installation is done . now you can start Semaphore Server. . the program starts and will ask you for a password. if you did not change

any . with that password it should be able to access your computer . you can login via secure . the program will start up with the installation wizard . at the first loading screen you have to press enter . and that will start semaphore server . the program will ask you the location of the Key. if you did not change the location you can use your existing key file . if you did change the key file location . the program will ask for a new key file . Click ok . the program will encrypt your key . now you can change the location of the key to a safe place or even to your own server and call it your new Key . you can save the file. this will allow you to update your server at any time . you can find the saved key file in the file manager
