Rotating the camera (view in the "Camera" display) is still an option for Mirror mode, which allows you to flip left to right. There is also the option to rotate to using the A or B buttons. Panning in the camera is more intuitive, now; Press and hold on the image, then release, to start panning. Flip mode is now Move. Double-tap to select a corner, then drag horizontally or vertically to move the selection. Before I double-tap, you can see the current pre-selection in the Preview window. The new Dialogs and Layouts features, such as Clipping Mask, are quite intuitive, even if it is somewhat crowded and could stand a little bit of more space. Another helpful touch is that the button to open the dialog window is now under the cropped thumbnail image. Photoshop has now completed a major update. A slew of new features were announced at the Adobe Max conference, including the roll-out of Photoshop Smart Objects in the Creative Cloud. Users can now apply three layers of gradient overlay effects to their existing green screen. In addition, Photoshop has been updated to allow color adjustment of layer properties.
