If you're planning to upgrade from Lightroom 4.x or earlier, I wouldn't recommend upgrading at this point. The first version to support the update is just around the corner. We often see professionals collect feedback from friends and peers in the form of comments on social media. They do this so that the comments can be filtered and only the comments that are relevant for the current project can be considered. Unfortunately, a large portion of these comments are not actionable to speak of and are not actually considered to be useful. With Share for Review, comments are now collected in the application for you to review and later on use them to create more effective designs. You can quickly add comments on new documents, open existing documents and review comments from other users. One of the most needed new features is Camera Layers. These Layers can be utilized to define how photos will be processed; you can shoot Sharpness Image, Exposure, White Balance and Distortion at the same time all in numerous other seemingly infinite combinations.
