Removing Adobe Photoshop is relatively easy and can be done in a few simple steps. First, go to Adobe's website and select the version of Photoshop that you want to uninstall. Once you have the download, open the file and follow the on-screen instructions. Once the installation is complete, you need to locate the uninstall.exe file and run it. Once the uninstallation is complete, remove the software. You need to be sure that you remove the software completely, so don't leave any traces left behind. Also, you'll need to disable any remaining security features, such as antivirus and firewall protection. Once these features have been disabled, you can remove Adobe Photoshop.

Perhaps it's Photoshop itself that's slowing down, not the computer. Today's graphics demand a lot of horsepower. If you have a fast machine to run Photoshop, you may be able to make a non-tactile, pen-on-paper look as good as a traditional scanned piece of art. If your computer is struggling, though, you may need to invest in some faster RAM. I must say that I was pretty disappointed to read the article. Did not like the voice for one, and I found the last section a rehash of the rest, just for the sake of being entertaining. Of course, you reviewed the features, but I appreciated the video review rather than just a list of the features, and the last section was just what I had expected before I read it I guess. Anyway, that would be all for now, thank you and good night. While some of the AI edits do need some time to develop, provided you've got a powerful enough machine (see Compatibility section) to run Photoshop, you should be impressed by how smooth the editing actually is. As mature as Photoshop Elements is (it must be nearly into its 20s as far as versions), Adobe keeps creating new features to incorporate. Often, Elements is given features before Adobe Photoshop and Adobe Photoshop Lightroom. Many of these new features are a result of Adobe Sensei Artificial Intelligence (AI) that allows otherwise complex manual tasks to be handled automatically. Nice review but after upgrading to LR5.2 RC I think performance is better than with LR4. Working on a project with 1500 D800 NEFs my impression is that the smart previews increase speed while working in the Developer mode - in Lib. mode however everything slows because the JPEG previews are used. So far I am not sure how the Jpegs are used as previews when you have the smart previews (DNGs) available. But have to say that I am happy with 5.2 RC although I will say bye-bye to LR the day they make it part of CC.
