They are not just for religious-themed creative work, but you get a lot of people who still like the classical themes as well. You will find all sorts of event information on Facebook. Facebook videos are huge attention-getters and shareability is high too. The audio evens capture and lend you some additional media richness. The difference between the two is that this program levels, processes, and edits video. It cannot make the bends, but you can apply a variety of lens filters. You can also add sound effects and music. The program's interface is slick, and it has some nice effects and menus. That said, editing is basic and not as flexible as Final Cut Pro. The program is constantly rearranging text, styles, text paths with tools that are easy to use. Unfortunately, Photoshop lacks an equivalent to Apple's "Get Info" for dealing with text, making for less efficient work. I am really happy with what I have heard about the new features released. In my opinion, I really like the new rendering system and the new improvements concerning Stretch Blur and the Color Variables. Hopefully there will be more updates soon. I would like to see the improvement concerning the

adjustment layers which allow you to change layers by pressing ctrl+click on the layer. The same goes for the lettering layers, which allows you to fine-tune lettering without having to erase and reapply a text layer. Slightly off topic: I would like to see an possibility to convert the image to an 8 Bit RGB, so that you can work more easily with a higher resolution. Encoding in JPEG 2000 will always bring additional optimization, but I would still like to have the possibility to work directly with the raw file, since I like to check the colors and not the point clouds. I don't really mind Graphic Conversion, both for exporting and importing, but I would appreciate working pixel-by-pixel instead of object-by-object. I like Blur and Converting, but I would like to see some more added features.
